CampaignBuddy.lk · by Dyro Technologies

Campaign Setup Guide

This guide walks through everything we need to set up your first campaign — what each field means, why we ask for it, and what a good answer looks like. The actual data goes into the companion spreadsheet, not this document.

Fill in "Campaign Setup Workbook.xlsx" — it has one tab per section below, in the same order, ready for you to type straight into. Use this guide alongside it if a field isn't obvious. When you're done, send the workbook back to your Campaign Buddy contact.

— 1 · ABOUT YOUR ORGANISATION

Workbook tab: "1. Client"

Company details

One record per client. If Campaign Buddy already manages another campaign for you, just give us the company name — we'll attach this new campaign to your existing record instead of creating a duplicate.

Company name *

The legal or trading name we'll show on your campaign records.

e.g. Radiance Cosmetics (Pvt) Ltd

Primary contact person *

Who we go to with questions about this campaign.

Contact number

A phone number for that contact.

optional

Email

Used for setup correspondence — not a login.

optional

Business address

Registered or head-office address.

optional

Which brand(s) does this cover?

A campaign can promote items from one or more brands under the same company — add one row per brand.

EXAMPLE		
#	BRAND NAME	NOTES
1	<i>Radiance</i>	<i>Flagship skincare line</i>
2	<i>Radiance Men</i>	

Products to track

Every item promoters will sell or stock-check, grouped under the brands from Section 2.

SKU / code

optional

Your own product code. Leave blank and we'll generate one.

Product name *

What promoters and reports will show.

Unit price (LKR)

optional

Used to calculate sales value against targets.

Reorder level

optional

Stock count that should trigger a low-stock flag. Defaults to 0 (off) if left blank.

Supplier / description

optional

Free text — photos can be added later in the portal.

EXAMPLE					
#	BRAND	SKU	PRODUCT NAME	UNIT PRICE	REORDER LEVEL
1	<i>Radiance</i>	<i>RAD-001</i>	<i>Radiance Brightening Serum 30ml</i>	<i>2,450</i>	<i>10</i>
2	<i>Radiance</i>	<i>RAD-002</i>	<i>Radiance Daily Moisturiser 50ml</i>	<i>1,890</i>	<i>15</i>

Campaign details

One workbook covers one campaign. If you're setting up more than one at the same time, use a separate copy of the workbook for each.

Campaign name *	Shows across the portal and mobile app. <i>e.g. Radiance Q3 Push</i>
Description optional	A short line on what the campaign is for.
Start / end date *	Sets the campaign's active window; status (upcoming / active / ended) updates automatically from these dates.
Timezone optional	Defaults to Asia/Colombo — only change if the campaign runs elsewhere.
Seat limits optional	How many promoter / supervisor / admin / sponsor logins the campaign allows. Defaults are 20 / 5 / 2 / 2 — only fill in if you need higher limits; going over a limit never blocks you, it just raises a warning.

Outlets / stores

Every location a promoter or supervisor will be stationed at.

Outlet name / address / city *	Enough for us to identify and geotag the location.
Contact person, phone, mobile optional	In-store contact for the promoter or supervisor.
Geofence radius (m) optional	How far from the pinned location a check-in is still accepted. Defaults to 150m. This is a soft flag only — check-in is never blocked, just marked unverified if outside range.

The exact map pin is dropped later by your Campaign Admin from the portal — an address and city is enough to get started.

— 6 · DISTRIBUTOR POINTS

Workbook tab: "6. Distributor Points"

Distributor / warehouse points

Optional — only needed if activations restock from a distributor rather than the outlet's own store room. Skip this tab if not applicable.

— 7 · FIELD STAFF

Workbook tab: "7. Field Staff"

Promoters & supervisors

Anyone who will use the CB Mobile app on the ground.

Full name, role *

Role is either Promoter or Supervisor.

Mobile number, based in (city)

Helps us route routes and shifts sensibly.

optional

Reports to

For promoters, the supervisor who oversees them.

optional

Employee ID and mobile login password are generated automatically when the account is created. Extra HR details — NIC, date of birth, address, emergency contact, bank account — are not needed now; they can be filled in later, person by person, from each Staff Profile in the portal.

— 8 · ACTIVATIONS

Workbook tab: "8. Activations"

Activations

An activation is one promoter assigned to one outlet for a date range — it's what actually appears on the mobile app and the field calendar.

Outlet, promoter, start / end date *

The minimum needed to create the assignment.

Supervisor, distributor point, shift times

Fill in where they apply.

optional

Target type / period

Whether targets are tracked per item or per brand overall, and whether they reset daily or monthly. Leave blank to use the campaign default (per item, daily) — only fill in for an activation that should work differently.

optional

Sales targets

Optional at setup — targets can be added or adjusted from the portal at any time once activations are running, so it's fine to leave this tab blank and set targets later.

Target value, measured in

Either a unit count ("units sold") or a sales value in LKR.

Repeats each period?

"Yes" re-applies the same target every day/month for the length of the activation; "No" applies it once, over the date range given.

Extra fields for daily reports

Beyond the standard sales and stock numbers, tell us if promoters should record anything else each day — e.g. "competitor price seen", "display compliant Y/N", "customer feedback". Leave the tab blank if the standard report is enough; this can also be set up later.

Type

Number, Text, Yes/No, or Dropdown (with your own list of options).

Captured per

"Day overall" asks once per activation per day; "Per product" asks once for every product being tracked, each day.

Admin & sponsor logins

People who need to log into CB Office (the web portal) rather than the mobile app — your Campaign Admin, and any client-side sponsors who should see reporting. Field staff from Section 7 don't need an entry here; they log in on the mobile app instead.

Role

Campaign Admin can edit everything in the campaign. **Sponsor** is read-only reporting access.

Outlet access

"All outlets" sees the whole campaign; "Specific outlets" restricts a sponsor to just the outlets you list — handy for a client who should only see their own region.

Notes for your Campaign Buddy contact

Special requirements, go-live date pressure, existing data to migrate, or anything not covered above — free text, in the workbook.

What happens after you send the workbook back

1. Dyro Technologies creates your client, brand and product records, and your outlets, from tabs 1–6.
2. We create the campaign and its first activations (tabs 4, 8–10), and the staff and portal logins (tabs 7 & 11).
3. Your Campaign Admin receives their CB Office login and can immediately edit, add to, or correct anything above — outlets, staff, targets, custom fields and sponsor access all stay fully editable after go-live.
